# Heat Bubble

*SAMITECH is revolutionising the pest control sector by improving classic heat treatments with a new technology based on far infrared waves that penetrate deep into the objects surface killing insects by dehydration.*

Portable and effective heat treatment solution that allows plenty of space available for treating any object in hotels, homes and offices.

Heat Bubble works for bedbugs, worms, moths, termites and other xylophages, mites, fungus... virtually any kind of insects.

*Heat Bubble technology is using the same heating principle of the solar waves*

The far infrared radiated heat is 100% safe for objects and as opposed to convection heat there is no waste of energy in heating the air.

The bubble is made of a light and flexible material that acts as thermal reflector and insulator. Six heating panels located in the bubble's internal sides generate the far infrared heat that kills insects by degrading their protein molecules.

 Does not require professional operators.

 High capacity (6m<sup>3</sup>) allowing treatment of several objects simultaneously.

 No chemical usage.

 Quick and silent treatment.
